

Syntax Tool Revised

Person Gender Number

I said I will guard my ways
lest I sin with my tongue
I will restrain my mouth with a muzzle
while the wicked are before me

[Then] I spoke with my tongue
⁴ make me to know Yahweh my end
and the measure of my days
what is [That] I may know how frail I [am]

² I was mute with silence
I held my peace [even] from good
and my sorrow was stirred up

⁵ Indeed [as] handbreadths You have made my days
and my age as [is] nothing before You
Certainly every [is] but vapor
Every man at his best state Selah

³ Was hot My heart within me
while I was musing burned the fire

⁶ Surely like a shadow walks about every man
surely in vain they busy themselves
He heaps up [riches] and not does know who will gather them

Overview

This tool highlights every word carrying grammatical person (verb conjugation, pronominal suffix, or independent pronoun) to surface person and number shifts, a structural device in Hebrew poetry that often marks strophe and stanza boundaries. Common patterns include address shifting between speaker and community ("I will praise" to "let us praise"), and address to YHWH shifting from direct ("you") to descriptive ("he") – a classic hymnic pivot.

Legend

Each code is Person, Gender, Number.

Person: 1st (speaker), 2nd (addressee), 3rd (other)

Gender: m (masculine), f (feminine), c (common – 1st person only)

Number: s (singular), p (plural)

For example, 2ms means 2nd person, masculine, singular – "you," addressing one person.

Disclaimer

When a verb is conjugated with both a subject and a pronominal object suffix (e.g. "he will bless *us*"), the smart highlighter colors the word by **subject only** to reflect who is *acting*, not who is *receiving* the action.

Notes

- This revision for Gender Number Person **replaces** the previous version
- Like before, the data pull from Xatas Table "**Heb_Bible**" and under Column "**Morphology**".
- Each chips searches the morphology code for the **Exact match** eg. 3ms chip searches for exactly "3ms", thereby excluding other codes like 2ms, 3mp despite partial match
- The chip glosses (eg. They them their (f)) should fit in one line)
- The chip code (eg. 3ms) should be bolded and in a larger font
- There are 10 chips, for 10 possible exact matches:
3ms, 3mp, 2ms, 2mp, 1cs, 1cp, 2fs, 2fp, 3fs, 3fp. This is a complete list
 - **Note that some verbs** can have 2 exact matches for morphology code.
Eg. V-Piel-Imperf.h-1cs | 2ms. In these cases, **both chips** 1cs and 2ms are a match - and that's okay. Note that this only happens on verbs.
- As usual, each chip has an occurrence counter on the chip - see mockups
- Add info pop-up button along with the text in the mockup slide

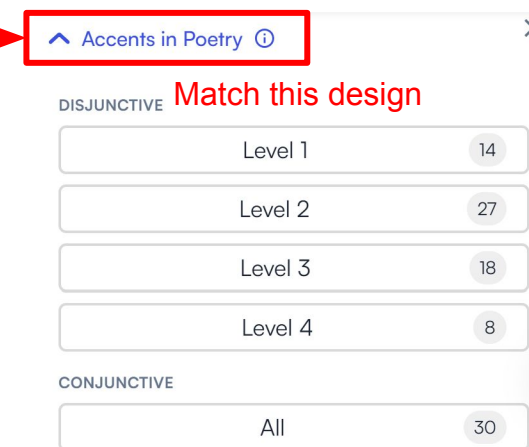

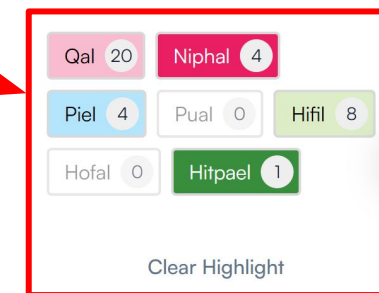

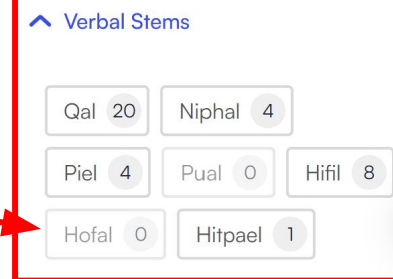

Smart Highlighter

- Hex codes for the smarthighter are in the table
- **If the verb has 2 exact matches**, the smart highlighter will apply **colors based on the first code**, ignoring the second code.
Eg. V-Piel-Imperf.h-1cs | 2ms. → #FFF9C4
- Like before, the user can select individual chips first, then click the “smart highlighter”, which would apply the preset colors only to the selected chips and the word boxes in the passage.
- If no chips are selected, when the user clicks the smart highlighter, then preset colors will be applied to all chips and word boxes in the text.
- When smart highlight colors are applied, the “smart highlight” button turns into a “clear highlight” button

Chip	Fill (hex)	Font color (hex)
3ms	#BBDEFB	#666666
2ms	#3F51B5	#FFFFFF
1cs	#FFF9C4	#666666
2fs	#9C27B0	#FFFFFF
3fs	#E1BEE7	#666666
3mp	#F8BBD0	#666666
2mp	#E91E63	#FFFFFF
1cp	#FFD54F	#666666
2fp	#607D8B	#FFFFFF
3fp	#CFD8DC	#666666

Refinements (Sep 15, 2026, 2:00pm)

- if the chip does not match any word boxes in the text, Eg. 3fp has 0 occurrences, that chip will be a lighter grey to indicate there is no match
- for the same chip with no match, when using smart highlighter, keep that chip uncolored to indicate there is no match in the text.
- Adjust the chip design to match the chips in other features (eg. Motif-> parts of speech). This will include, reducing the roundness of the box, increasing thickness of the box, reducing horizontal padding within the chips (so it would retain 2 columns even when the sidebar is more narrow)
- adjust the info popup button to match design in other features (eg. structure -> Pausal forms) where the info button is blue, and closely adjacent to the heading.

On a similar note

- would you mind adjusting the info buttons in Sounds tool as well, looks like a different icon to match design
